

Space saving and money saving

Free of plant pests / Exporting

Inka Presswood pallets meet the most rigid phytosanitary measures of IPPC-FAO ISPM no.15. This means that no extra heat or gas treatments are needed for export to the USA, Australia, China, Mexico and other countries.

Low moisture content

Having an ex-factory moisture of only 6-8% means little or no moisture is transmitted to the product.

Safer

Inka Presswood pallets are manufactured without nails or screws, which may come loose causing injury or damage. Each pallet has a solid upper deck to provide optimum protection for the palletised load.

Nestability

Inka Presswood pallets nest neatly together which saves storage space and reduces handling time.

Environment

Inka Presswood pallets are manufactured from recycled waste timber, which helps to keep cost to a minimum. They are bonded with a synthetic resin which aids water resistance. Inka Presswood pallets meet current European Legislation and can be recycled in the same way as a normal timber.

Easy packing

Inka Presswood pallets have tapered legs and rounded corners, which make them ideal for shrink or stretch wrapping. Furthermore, the pallets provide an excellent base for boxes or trays and due to the pallets' high density, offer good staple, nail or screw retention.

Familiar

Inka Presswood pallets have been available for over 25 years and are sold extensively throughout Europe, USA, Middle East and Asia. Furthermore, Inka pallets are easily identified and are not recognised on the second-hand pallet market.

Wide range

Inka Presswood pallets are available in a choice of standard sizes and loading capacities to meet various requirements. Choose from regular 800x1200 mm and 1000x1200 mm sizes, or smaller 'display' pallets. Display pallets are designed to palletise point-of-purchase displays; smaller loads or compact products.

Convenient size and constant shape

Important for exact loading on all types of transport and facilitates future nesting. Having a constant tare weight eases the calculation of gross and tare weights of packaged goods.

Packaging Waste

As of January 2000 Wood will be included within 'Packaging Waste' recovery and recycling obligations. Due to the low tare weight of Inka Presswood pallets this could reduce your company's obligations relating to wood by as much as 50%.
